TERRAPACTOR[®]

Light Weight MX Competition Series

Terrapactor[®] S/T

25% Dry - 75% Wet

25% Hard - 75% Soft

We've named our light weight MX competition series after our trademark innovation. We believe the tread design is the best available for maximum drive and cornering at speed - winning the holeshoot and holding the inside line often wins the race. Light weight construction coupled with rigid and flex zones in the carcass helps keep the tread on the ground for awesome traction in bumpy rutted conditions.

TRACTIONATOR[®]

NEW!

Tractionator[®] Enduro S/T

50% Dry - 50% Wet

30% Hard - 70% Soft

The new Tractionator Enduro S/T (soft terrain) has been designed to give aggressive traction in soft terrain with longer wear than regular soft terrain tyres - MX grip with enduro strength and wear. Excellent for all weather in soft/varied applications.

Rotation

Riders can reverse rear direction when partially worn for extra grip and longer wear. The tread design gives rider choice for slightly better grip in their local conditions - whether mostly wet (mud), or mostly dry (loam and sand). The difference in handling can be as much as 10-15% depending on conditions. In varied or mixed conditions, best traction is achieved when new tyre is mounted in wet rotation, and changed to dry rotation half way through tyre life. Changing rotation isn't essential, but appeals to budget conscious riders who seek maximum wear life.

- Heavy Duty Series

MOTOLZ
HI PERFORMANCE OFFROAD TYRES

Tractionator[®] Enduro I/T

90% Dry - 10% Wet
75% Hard - 25% Soft

Designed for enduro (USA dual sport) and trail use in varied terrain. Excels on steep hill climbs and tight twisting single trails. The natural rubber compound and unique tread work with the terrain, creating drive and lift over obstacles and offers proven reliability for long distance events and multi day events.

Tractionator[®] X Circuit I-H/T

80% Dry - 20% Wet
50% Hard - 50% Soft

MX grip with long distance durability. Handles multiple applications from MX to Desert racing. Hare Scrambles to multi day enduro. The asymmetric tread design gives a high grip/wear ratio and is smooth and predictable. The front is great for taking the inside line and is reversible (direction switchable) for different applications or track surface conditions (tight pack or loose pack terrain).

Tractionator[®] Desert H/T

95% Dry - 5% Wet
90% Hard - 10% Soft

Designed to handle hard terrain, fast rocky fire trails, gravel roads and desert hard pack with sandy variations. Its unique tread design handles off camber sections, ruts, hard braking at extreme lean angles. It's built very tough and has our endurance proven 100% natural rubber compound for long distance mileage.

Our unique "Terrapactor®" (terrain compactor) innovation works with the terrain to increase traction by compressing and wedging the terrain to create extra drive and lift.

We believe Motoz tyres are the best available. Why?

Better Rubber Quality.

We use the natural substance of traction - 100% natural rubber.

Innovative tread designs.

Our trademark "Terrapactor" principle works with the terrain by compacting and wedging it to help increase traction rather than just throwing it behind the bike.

Custom Construction.

Each series has different construction tailored to the application. High strength ply material achieves higher ply rating with less ply layers. Tractionator series is super heavy duty and has unique sidewalls and reinforcement to reduce punctures and pinch flats. Terrapactor series is light weight and has zones of rigidity and flexibility to maximize traction.

Easy to fit.

Better for service times.

Crown Radius Section (CRS)

Tailored to each application for better grip/wear ratio.

Terrain - Application

H/T - Hard Terrain (gravel roads, rocky hills and fire trails, hard pack desert and sand)

I/T - Intermediate and mixed Terrain (mixed trail and mountain conditions, fire trails, forest and mixed bush).

S/T - Soft terrain (soil, sandy loam, pine forest, mixed mud/dry)

I-H/T - Intermediate to Hard Terrain

I-S/T - Intermediate to Soft Terrain.

Motoz designers and test riders are the same people. First and foremost we are dirt bike enthusiasts who love riding off road. Our goal is to innovate, design and produce better off road tyres with high grip/wear ratios (positive traction but long wearing) in a wider variety of conditions. Our production is ISO9001 certified in a privately owned factory in Thailand.
